Diploma in Ruminant Nutrition (Dip RN)

Who can benefit?

Those individuals working in technical, sales or advisory positions within the ruminant feed industry.

Why Harper Adams?

We have a long and successful history of delivering cost effective courses to rural professionals.

We take a committed approach to fostering good practice in skills development within the land-based industries.

Why you should apply...

Underpinning commercial activity with this Diploma will demonstrate your commitment to the animal feed industry.

Learning occurs in all aspects of our daily lives, so why not take the opportunity to gain a Higher Education qualification for it?

About the course

The course has been designed to provide knowledge of the principles, practice, recent developments and legislative requirements of ruminant nutrition as well as an opportunity to apply it in a practical context.

Programme of study

The course is composed of four modules, each delivered in flexible blocks of between 1-5 days length. In addition to formal lectures, the programme will be composed of tutorials, laboratory practicals, farm and feed mill visits. Extensive use of the range of resources at Harper Adams will support these sessions. Topics covered include ration formulation; grazing and forage management; dry cow management; nutritional effects on milk quality, fertility & health; and suckler cow & ewe nutrition.
